

Extended Seat Runners

The Extended Seat Runners, from Des Gosling Mobility, move the driver or front passenger seat back by 100mm to provide a simple yet effective solution for a variety of vehicle access issues. Original seat adjustment and functions are retained to maintain comfort, and the vehicle specific kits blend in seamlessly with the vehicle interior.

STRONG 8mm THICK LASER CUT STEEL FOR SAFETY

VEHICLE SPECIFIC FITTING FOR CONSISTENT QUALITY

DESIGNED AND MANUFACTURED IN THE UNITED KINGDOM

LOADING A MANUAL WHEELCHAIR?

When loading a manual wheelchair across your body into the front passenger seat, this product creates extra space between you and the steering wheel to ease this process. Put an end to scratched steering wheels and snagged clothing.

SIMPLE KITS TO FIT AND TO REMOVE

Brackets mount to the existing seat fixings and are supplied with all spacers and fasteners required for an easy fitment. Removal if you decide to sell the vehicle is also simple, in most cases leaving no trace that the brackets were ever there.*

DIFFICULTY GETTING IN/OUT OF THE CAR?

If you find your feet hitting the inside of the door as you swing them in/out of the vehicle, give yourself some extra legroom as you get in and then adjust your seat to a travelling position once you are seated.

PERFECT FOR PERSON HOISTS

When using person hoists there can often be limited space between the dashboard and the seat for the user's legs to go into. An extra bit of space here can make all the difference and remove the risk of bruising the legs whilst transferring.

**Some kits do require a small amount of cutting to carpet or trim to install, please speak to your installer for information.*
