MAXIMISE YOUR DRIVING COMFORT

Fully adjustable between 2.5 - 4.5 inches at time of fitting, the organ pedal extension places the pedal in comfortable reach.

For most extensions a second driver can still drive comfortably simply by adjusting the seat and steering wheel position.

COMBINE WITH PEDEX BRAKE KITS

As well as being less safe when driving, stretching for the pedals in any car can cause discomfort in your legs and/or lower back. Suitable for use with Des Gosling Mobility PedEx brake pedal extensions to give a perfect position for both pedals.

SHORT EXTENSION ALSO AVAILABLE

For situations where only a very short extension is required, a universal kit* allows for this and maintains the pedal size for easy driving. Speak to your installer to determine what length of extension you need.

NO DAMAGE TO YOUR CAR, OR IT'S LOOKS

Vehicle specific mounts mean no damage to the pedal when fitted* - no need to drill any holes! The sleek pedal and mount designs also maintain the overall aesthetic of your car.

**universal fit kits will require a few small holes to be drilled in the pedal face*
