

Rise and Fall Seat

The Rise and Fall Seat from Des Gosling Mobility electrically adjusts the height of your seat, to allow for easier transfers and a more comfortable driving position. The Rise and Fall Seat also offers 'fore and aft' movement, as it rises up and down. This brings the seat close to the aperture of the door for an easy transfer, for both drivers and passengers.

LOW PROFILE DESIGN

With just a 90mm closed height, this Des Gosling Mobility product is the lowest profile height adjusting seat mechanism on the market, especially when paired with the Recaro seat. This makes it more ergonomically viable for more people, helping you find that comfortable and safe driving position.

MASSIVE RANGE OF ADJUSTMENT

Offering an 180mm range of vertical adjustment and 230mm of fore-aft adjustment, the Rise and Fall seat is hugely versatile and suited for the needs of many.
