

# Pedal Guard Premium Quick Release

The Quick Release Pedal Guard, from Des Gosling Mobility, provides safety for drivers using hand controls, by preventing accidental operation of the pedals, and entrapment of feet or prosthetics underneath them. The guard can easily be removed using a simple quick-release mechanism, allowing the vehicle to be driven as standard with the pedals.

## WORRY FREE REMOVAL & ATTACHMENT

With no fasteners to lose, and tested to work even after significant force has been applied to the guard, you can rely on the quick-release day in, day out. Operable using just one hand, it also includes a marker so you know when the guard is safely locked in place.

## MAXIMISE YOUR DRIVING COMFORT

Guard 'hugs' the pedals to give extra legroom compared with guards mounted on the floor of the footwell, so you can stretch out your legs for maximum comfort. Also available as a brake only guard, allowing for combination with hinged accelerator pedals.
